

Ravendale®

9-11mm Blue Grey Slate

Our Ravendale 9-11mm Blue Grey is a superior Brazilian slate produced from an exclusive quarry by our trusted partner and quarry owner Black Slate ZPP. Dealing directly with the quarry owner means we have full control over the raw material and production process, ensuring consistent quality and full traceability.

The uniqueness of our Ravendale 9-11mm slate is that it is produced from a specific material called **Matacao**. This has a very dense and compact structure which means it minimises the risk of delamination. Our access to this **Matacao** raw material is a key factor that sets our Ravendale 9-11mm slate apart from alternatives in the UK market. The **Matacao** stone has to be extracted from an exact depth in the quarry to ensure the quality, strength, and consistency. These methods will never be compromised.

We produce the slate in a wide variety of sizes, including Fixed Length x Random Widths and also a Diminishing Courses x Random Widths option. The thickness spec is solely 9-11mm to give us the quality of product required.

Our Ravendale 9-11mm slate has been specifically tested in the UK to BSEN12326-1:2004, attaining A1, T1 & S1 certification.

Ravendale® Blue Grey Slate

Our trusted partner Black Slate have been pioneers in the international market and have been exporting slate for over 30 years. They were the first to export slate into the UK market from Brazil. The production facilities at Black Slate are state of the art, and their workforce are well trained and highly professional. The fact that UK Slate deal directly with Black Slate means there are no 'middle' agents involved. That relationship means the supply chain is robust and transparent.

The use of the **Matacao** stone is vital in the production of our Ravendale 9-11mm products.
